

Dayton Audio Challenges the Perception of Budget Tower Speakers

DAYTON, OH (January 30, 2019) – Building on the success of the MK442 center channel speaker, which was recently named Audioholics's 2018 budget bookshelf speaker of the year, Dayton Audio has announced the release of the MK442T 2-way transmission line tower speaker.

The MK442T continues the motif of high-fi audio quality, elegant enclosure design, and engineering sophistication the MK family provides while retaining budget friendly sensibility. The new tower speaker utilizes the same driver and tweeter as the previous MK models, meaning they will flawlessly complement any MK speaker. Pairing dual 4" paper cone woofers and a 3/4" soft dome tweeter with a painstakingly designed crossover system and efficient quarter wave transmission line enclosure, the MK442T delivers a tight low end down to 40 Hz while still representing the vocal range accurately.

MK442T Cross Section

The quarter wave transmission line enclosure makes it possible to produce deep articulate bass with smaller drivers and lower profile enclosures. Compared to a traditional bass reflex cabinet, a transmission line is able to produce lower bass without the worry of port resonance and turbulence. This means better bass, lower distortion and a smaller footprint.

The crossover featured in the MK442T utilizes a 3 kHz, 2nd order low pass and a 3rd order high pass section, and was designed to deliver the smoothest, flattest frequency response possible.

Create a complete timbre matched home theater setup; just add a pair of MK402 bookshelf speakers, an MK442 center channel and a powered subwoofer like our SUB-1500. The Dayton Audio MK442T challenges the preconceived notion that budget speaker systems sacrifice audio quality for economical pricing.

The MK442T tower speakers stand just over 38" tall and are sold in pairs.
