

Turn Your Audio Setup into a Wireless System

DAYTON, OH (December 10, 2018) – Enclosed in a small footprint, the Dayton Audio WBA31 Wi-Fi and Bluetooth audio receiver turns any audio setup into a modern, wireless enabled system.

The WBA31 has the ability to stream via Wi-Fi with the Dayton Audio Hi-Fly app, Bluetooth, micro SD media player, or with a 3.5mm analog input. The Hi-Fly app can control device functions, streaming management, playback, and multi-room configuration. The receiver is compatible with Airplay for iOS devices as well as DLNA.

Not only does the WBA31 have the ability to stream audio from virtually any device, it also features popular music apps built-in such as Spotify, TIDAL, Napster, TuneIn, and iHeartRadio. Blazing fast 150mbps 2.4 GHz Wi-Fi and Bluetooth V4.0 give the WBA31 a strong connection for uninterrupted playback and control.

With a variety of streaming, input, and output options the WBA31 is easily integrated into any home audio system. The freedom of wireless streaming and control makes WBA31 perfect for retro-fitting systems without wireless capabilities. The WBA31 is powered by a 5V/2A micro USB and is easily hidden from view. The package also includes a wireless multi-function IR remote control, power supply, micro USB cable, and AUX 3.5mm cable.
