

2 x 6W TWS Pairing Bluetooth 5.0 Amplifier Board

User Manual

Model: TBAB-26

Expand your wireless Bluetooth experience with Dayton Audio TBAB-26 multi-pairing Bluetooth amplifier board. Use it as a single stereo HiFi Bluetooth 5.0 2 x 6W amplifier board, or add another board (sold separately) and pair them together for wireless left and right channels.

Build two portable Bluetooth speakers with them and set them up to 30 ft. apart. Pair the master board/speaker with your iPhone. Pair the master with the slave and enjoy left and right stereo sound between the two boards/speakers. Some Android devices have a media output function that enables you to have two Bluetooth boards/speakers paired at the same time. With this option two masters and two slaves pair together for even more Bluetooth wireless options.

Pairing Two Boards Together

1. Pair one board to your phone and play music through the board. This will be the master board.
2. Press and hold down the button on the master board until it beeps.
3. Press and hold down the button on the second board until you here a chime tune. This will be the slave board. Wait a few seconds and you'll hear your music playing through both boards.
4. These boards will stay paired until you press and hold down the button on the slave board to free it from the master board.
